

PENDING CLAIMS AS AMENDED

Please replace claim 9 as amended:

- 2 *Sub 6* 9. An apparatus for transmitting spread spectrum data, comprising:
a spread spectrum modulator; and
at least one upconverter having an output, coupled to the spread
4 spectrum modulator, the output of the upconverter having a carrier frequency
changing in accordance with a predetermined pattern, wherein the spread
6 spectrum modulator modulates the spread spectrum data in accordance with a
code channel selection signal that is determined in accordance with a subset of
8 bits of the spread spectrum data.
